## SMILE

- Smiling engages many facial muscles, resulting in the brain sending, via the neural messaging system, the happy hormones of dopamine and serotonin throughout your body. These hormones impact wellness and joy; in turn, they reduce your stress and positively impact your happiness and contentment.
- Choosing to smile more helps those heightened emotions that can raise blood pressure, tension, and physical discomfort. Smiling during short-lived stress diminishes the impact of the stress response. Smile more, think less! There's Magic in Your Smile!
- Watch your favorite funny movie, comedian, or show to laugh heartily, which offers health benefits for your heart, brain, and blood!
- Connect with family and/or friends via gatherings on FaceTime, Zoom, Skype, Google Meet/Hangouts, WhatsApp, etc. in order to connect, smile, and laugh!
